                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted (06 MAR-2001) Human Genomic Center, Institute of Genetics, Chinese Academy of Sciences, Datun Road, Beijing, Beijing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Luo, C., Bao, J., Bao, W., Bian, X., Cao, T., Chen, C., Chen, J., Ding, H., Dong, W., Fan, H., Feng, X., Gong, J., Guan, Q., Gu, X., Guo, D.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Genetics,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 4 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

It currently consists of 45 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

```
The present invention relates to an isolated protein which serves as a receptor in plants for plant pathogen hypersensitive response elicitors (HRE). The plants are made resistant to infection by viruses, bacteria and fungl and are imparted with resistance against environmental stress and fungl and are imparted with resistance against environmental stress and insects through HRE treatment. The protein is useful for understanding the harpin (Erwinia amylovora hypersensitive response elicitor) induced signal transduction pathway in plants. The protein is useful for studying the downstream components of signal transduction pathway in plants which eventually leads to disease resistance, growth enhancement, insect control and stress resistance. Imparting disease resistance to plants through HRE treatment has the potential to treat previously untreatable diseases, treating diseases systemically which might not be treated separately due to cost and avoids the use of infectious agents or environmentally harmful materials. By HRE treatment enhanced plant growth is achieved which includes greater yield, increased quantity of seeds produced, increased percentage of seeds germinated, increased plant size, greater biomass, more and bigger fruits, etc. which results in economic benefit to cultivators. Greater yield, increased size and enhanced biomass allow greater revenue generation from the given plot of plant. The present sequence is protein chan.
                                                                                                                                                                                                                     New plant pathogen hypersensitive response elicitor-receptor protein isolated from plants, which upon silencing is used to study plant signal transduction pathways leading to disease resistance and growth
                                                                                                                                                                                                                                                                                                                                                    Oisclosure; Page 19; 78pp; English.

encoding silk protein. The process involves: (a) selecting target DNA, crown a silk-producing spider, that contains many repetitive and non-repetitive regions; (b) selecting a single-stranded DNA primer of at least 10 nucleotides with a sequence that is complementary to a region of the target; (c) repetitively combining the primer with melted target. DNA, incubating the mixture with nucleotides and a DNA polymerase with profereding activity to produce a DNA fragment which is complementary to the target and is at least 2 kb long. The present sequence represents a 2 kb DNA sequence which encodes the spider silk protein from Nephila clavipes. The DNA fragment can be used to make fibres, films, woven articles, e.g. for use in parachutes, sails, body armour, and absorbers (e.g. of heavy metals, biological weapons, DNA, chemicals, flavours and fragrances). The high molecular weight (90-250 kD) of spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins can be produced on a commercial scale (at over spider silk proteins).

Antigen 1 (EBNA 1), which is obtained from commercially available plasmid pcWYEBNA. EBNA 1 protein is used to stably maintain episomes containing EBV origin of replication (orig) and agene encoding protein or RNA of interest. Eucaryotic host cells expressing EBNA 1 protein are transfected with these episomes to produce recombinant cell lines expressing multiple genes of interest. This provides a rapid and reliable method of stably expressing multiple genes. In transfected cells. The episomes are useful in the transfection of genes encoding receptors, transporter proteins, ion channels, adhesion
                                                                                                                                                                                                                                                                                                                                                      episome; transfection; origin of replication; EBV orip; receptor; everaporic host cell; recombinant cell line; ion channel; gene therapy;

                                                                                                                                                                               Costal-2 is a kinesin-related protein in the Hedgehog signaling pathway. The invention concerns novel secreted and transmembrane proteins, designated PRO polypeptides. The cDNA and gene sequences are useful in the recombinant production of PRO polypeptides, as a hybridization probe to screen libraries to isolate cDNAs with sequence identity to PRO polypeptides or to map the gene encoding the PRO polypeptides and analyzing genetic disorders. The cDNA/gene can also be used to produce transgenic animals useful for the development and screening of therapeutically useful reagents. They can also be used the gene therapy, e.g. to replace a defective gene.

This invention describes novel DNA sequences (I) for specific detection of Seademonas putida KT2440. The invention also describes (1) coff Seademonas putida KT2440. The invention also describes (1) cutaryotic cells transformed or transfected with (I) or the vector of (1); (3) production of expression products by culturing cells of (2); (4) expression products, or their fragments, of (1) and synthetic corrections or peptides with the same sequences (A); (5) poly- or proteins or peptides with the same sequences (A); (5) poly- or considerable and inibodies (Ab) that react specifically with (A); (6) plants that contain transformed or transfected cells of (2); (7) transgenic plants that contain transformed or transfected cells of (2); (8) considerable or more (I). (I), and their fragments, are used so probes to detecting KT2440 using a labeled (I) or Ab as probe; and (9) DNA chips carrying one or more (I). (I), and their fragments, are used for detecting the presence of KT2440, particularly in presence of other, or antibodies that recognize their expression products, are used for detecting the presence of KT2440 particularly in presence of other, or antibodies that recognize their expression products, are used for detecting the presence of KT2440 particularly in presence of other, or an as safe, by the National Institutes of Health, for genetic engineering work, e.g. as microbial production strains, for biological remediation and as vaccine carriers (I) are exclusive to KT2440 with no significant homelogy with sequences in other bacteria (specifically the closely the hardons and better surviyal in, and adaptation to, the physobora and as vaccine activity and better surviyal in, and adaptation to,
                                                         safe genetic engineering host, allow detection in presence of related bacteria
                                                                                                                                                                                - - - 1

DNA sequence of human PPP2R2B

```
polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase obtain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) as useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. (In polymeride and polymucleotide sequences have applications in claspnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2515 CAGCAGGAGCAGGAGCAGGAGCAGGAGCAGCAGCAGCAGGAGCAG 2456
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               85 cagcagtcgccttcggctggctccgagcagcagctggatcagttgctcgccatgttcatc 144

The invention relates to a microsatellite marker located on human chromosome 5q31-33 between markers D5S402 and WI-6763, comprising a variable number of CAG trinuclectide repeats. The marker is useful for diagnosing spinocerebellar ataxia 12 (SCA12) by determining the number of PPD2A parameter is a brain specific regulatory subunit of protein phosphatase PP2A, where if a number greater than 40 ½ determined, an expansion which is associated with SCA12 is indicated. The presence of expanded trinuclectide repeats on chromosome 5q31-33 is useful for predicting or diagnosing SCA12. Also provided are primers useful for amplifying the microsatellite marker associated with SCA12 and for diagnosing SCA12 and proceed on human chromosome 5q31-33. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ï

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence encodes a hypersensitive response elicitor from Pseudomonas solanacearum. The elicitor may be used in a new method for imparting pathogen resistance to plants, by application of the elicitor in a non-infectious form to plant cells, by spraying, injection, leaf abrasion, or plant infection with recombinant bacteria (non-infectious to the host plant, e.g. Escherichia coll) expressing the elicitor as a biological control agent, to alllow recombinant protein infiltration into the plant. The method confers virus, bacterium or fungus disease-resistance on crops and

Use of hypersensitive response elicitor polypeptide - for application to plants or seeds or transgenic plants or seeds for the control of insects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide or protein to control insects on plants or plants grown from seed treated with HRE. Also claimed is a method of insect control for plants that involves: (a) providing a transgenic plant or seed transformed with a DNA molecule (see AAV54606-09) encoding a HRE polypeptide or protein (see AAW75862-67); and (b) growing the transgenic plants or transgenic plants produced from the transgenic seeds to control insects. HRE prevents direct insect damage to plants by feeding injury. It kills insects close to plants, and interferes with insect larval feeding on such plants. It also prevents insects from colonising host plants and releasing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This DNA sequence comprises an open reading frame that encodes a hypersensitive response elicitor (HRE) (see AAW75865 of Pseudomonas solanacearum. The invention relates to the use of a HRE
                                                                                                                                                                                                              solanacearum hypersensitive response elicitor DNA.
                                                                                                                                                                                                                                                insect resistance;

```
This DNA sequence comprises an open reading frame that encodes a hypersensitive response elicitor (HEE) (see AAWGA57) of Pseudomonas solanacearum. A method of enhancing growth in plants comprises:

(a) applying a HRE polypeptide or protein in a non-infectious form to a plant or plant seed under conditions effective to enhance growth of the plant or plants grown from the seed, or (b) providing a transgenic plant or plants grown from the seed under conditions of encoding a HRE polypeptide or protein, and growing the transgenic plant or a plant produced from the transgenic seed under conditions of effective to enhance plant growth. HRES (see AAW62454-59) or nucleic acids (see AAW62454-57) encoding them can be used to increase plant growth. THE HES may also result in increased plant height and growth, and effect early germination and maturation of plant seed and early colouration of fruit and plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Wethod for enhancing plant growth - comprises use of hypersensitive response elicitor polypeptide or protein which may also effect, e.g. increase in plant height or earlier germination seed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            211 aacggtcaacaggaaggcctgagtccgttgacgcagatgctgatgcagatcgtgatgcag

```
a coding region for a hypersensitive elicitor protein (HRE, see AMW6115). The invention relates to methods of imparting hypersensitive response induced resistance to plants by treatment of seeds. Isolated HRE polypeptides can be applied to seeds as a means of imparting pathogen resistance to plants grown from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Erwinia amylovora, Pseudomonas syringae, Pseudomonas solanacearum, Asanthomonas campestris pv. glycines and kanthomonas campestris pelargonii (see AAW61113-18) are provided. The methods can impart pathogen resistance without using agents which are harmful to the environment or pathogenic to the plant seed being treated, or to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       seeds. Alternatively, bacteria containing the gene encoding the HRE can be applied to the plant seeds, or transgenic plant seeds containing a DNA molecule encoding an HRE polypeptide or protein are used. HRE polypeptide sequences from Erwinia chrysanthemi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pseudomonas solanacearum comprises

The present sequence encodes a hypersensitive response elicitor protein (also called hairpin protein) that is able to elicit a hypersensitive response in plants. The specification also describes hypersensitive response elicitors from other pathogenic organisms. The protein, in non-infectious form, is applied to plants to impart disease resistance (to a wide range of viral, bacterial and fungal pathogens), to improve growth (yield, quantity and quality of seeds, to provide earlier germination etc.) and to control insects (e.g. corn borers, Lepidoptera larvae etc.) The same results are provided by transgenic plants expressing the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              211 aacggtcaacaggaaggcctgagtccgttgacgcagatgctgatgcagatcgtgatgcag 270

DNA encoding a hypersensitive response elicitor protein.

08-AUG-2000 (first entry)

```
The patent discloses a method to impart stress resistance to plants by applying a hypersensitive response elicitor in a non-infectious form to a plant or seed. The present sequence is a DNA encoding hypersensitive response elicitor protein from Pseudomonas solanacearum. The present sequence is used to transform transgenic plant or plant seeds to impart stress resistance.
                                                                                                     Pseudomonas solanacearum hypersensitive response elicitor encoding DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Application of a hypersensitive response elicitor protein to plants impart stress resistance
                                                                                                                                   Hypersensitive response elicitor; environmental stress resistance;

polypeptide. The specification describes hypersensitive response elicitor polypeptide fragments, which do not elicit a hypersensitive response. Instead, the proteins impart disease resistance to plants, caponse. Instead, the proteins impart disease resistance to plants, cannot plant growth, and/or control insects. The polypeptide fragments may be used to these properties to plants. The plants which may be treated in this way include vegetables, crops and ornamental plants such as alfalfa, rice, wheat, barley, rye, cotton, sunflower, peanut, corn, potato, sweet potato, bean, pea, chicory, lettuce, endive, cabbage, brussel sprout, beet, parsnip, turnip, cauliflower, carrot, squash, pumpkin, zucchini, cucumber, apple, pear, melon, citrus, strawberry, grape, raspberry, prape, raspberry, prape, raspberry, prape, control, sorghum or sugarcane, arbidopsis thaliana, saintpaulia, comato, sorghum or sugarcane, arbidopsis thaliana, saintpaulia, petunia, pelargonium, poinsettia, chrysanthemum, carnation or zinnia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       712 agcgaagaccagggcggcctcaccggcgtgctgcaaaagctgatgaagatcctgaacgcg 771

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                     1 atggactctatcggaaacaa......gcagcctgggcggcaacgcc -342
